

The objective of this tutorial is to help you overcome common mistakes and misunderstandings when developing basic css layouts. Although the example output below may look very basic, you may be surprised at the pitfalls and unexpected behaviours that you are likely to encounter.

Download the Tutorial 6 Problem folder and locate the files needed for this tutorial. Your tutor will walk through the entire problem with the class.

- Ensure that you can see the html file.
- Ensure that your css file is open and ready to edit as you follow along with the tutor.
- Open a browser window to see the effects of your css as the tutorial progresses.

A model answer will be provided at the end of the tutorial, however the real value lies in the discussion that will occur during the tutorial.

The “final” result will look like this;
